SUMMARY

UI/UX Designer with 6+ years of experience owning end-to-end product design across web and mobile — from discovery and user research to high-fidelity prototyping and pixel-perfect developer handoff. Skilled at turning complex business requirements into intuitive, enterprise-grade interfaces that balance visual precision with functional clarity. Experienced working within agile teams at a product engineering company, collaborating across design, development, and product to ship experiences that are consistent, accessible, and built to scale.

EXPERIENCE

Galaxy Weblinks LTD, Indore
UI/UX Designer

(March 2020 - Present)

- Owned end-to-end UX design for 20+ web and mobile products, driving interface consistency across Android, iOS, and desktop — reducing cross-platform design discrepancies and cutting QA-flagged visual inconsistencies per release.
- Led structured user research and usability testing sessions to surface friction points in product workflows — translating findings directly into design decisions that shortened user journeys and improved task completion clarity across key product flows.
- Converted product briefs into structured wireframes, user flows, and high-fidelity prototypes — giving stakeholders and developers a shared visual reference that reduced misalignment in reviews and compressed feedback cycles before development began.
- Built interactive prototypes in Figma, Sketch, and Adobe XD to validate interaction logic with stakeholders and assess technical feasibility before development — directly reducing mid-sprint design revision requests and improving dev handoff accuracy.
- Redesigned legacy product interfaces to meet current WCAG accessibility standards and responsive design requirements — eliminating critical usability gaps on mobile and tablet viewports and modernizing visual systems to align with updated brand and product direction.
- Partnered directly with product managers and engineering leads across sprint cycles to align design intent with technical constraints — maintaining design fidelity from Figma to final build and reducing implementation gaps through proactive design reviews.
- Architected a reusable component library and design pattern system in Figma — standardizing UI elements across products, reducing screen design time for new features, and giving developers a single source of truth that cut clarification requests during handoff.
- Established a structured developer handoff process using Zeplin and Figma — delivering annotated specs, asset libraries, and interaction notes that gave engineers everything needed to build without back-and-forth, tightening design-to-deployment cycles.
- Mentored junior designers through structured critique sessions and design reviews — establishing review cadences that elevated output consistency, accelerated their design decision-making, and maintained a high bar for interaction quality across the team's work.

EDUCATION

UX/UI, & Web Design Diploma course from Silica Institute, Indore (2018-2020)
Bachelor of Commerce from D.A.V.V. University, Indore (M.P) (2021-2023)
(Completed alongside full-time employment at Galaxy Weblinks)

CORE SKILLS

UX & Research:
Human-Centered Design, User Research & Usability Testing, Information Architecture, User Flows & Journey Mapping, Heuristic Evaluation, Competitive Analysis

UI & Visual Design:
Interaction Design, Visual Hierarchy, Responsive & Adaptive Design, Mobile-First UI, Accessibility Standards (WCAG), Emotion-Driven Interface Design

Product & Systems Thinking: End-to-End Product Design, Design Systems (Build & Ownership), Wireframing & High-Fidelity Prototyping, Agile & Sprint-Based Workflows, Scalable Component Libraries

Collaboration & Delivery
Developer Handoff, Cross-Functional Team Collaboration, Design Documentation

TOOLS

- Figma
- Sketch
- Framer
- Adobe XD
- Photoshop
- Illustrator
- Motiff
- Canva
- Zeplin
- Notion

WORKING STYLE

- Feedback-driven
- Detail-obsessed
- Research-informed
- Systems thinker

INTEREST

- Sports
- Designing
- Video Games
- Esports
